FAQ: Frequently asked question

LIST: a list of information topics

<sup>a</sup>Independent samples *t* test.

<sup>b</sup>One-way analysis of variance (ANOVA).

<sup>c</sup> $P=.01$ .

<sup>d</sup> $P=.003$ .

<sup>e</sup> $P<.001$ .

<sup>f</sup>Welch statistic with Games-Howell post hoc test for unequal variance.

<sup>g</sup>post hoc comparisons indicated that the mean score for the 35-49 year age group was significantly different from the 50-59 year and 60-74 year age groups. The 50-59 year and 60-74 year age groups did not differ significantly from each other.
